RESUME SUMMARY

I am an aspiring IT professional passionate about leveraging AI and IoT to build innovative solutions. With strong skills in programming and web development, I aim to enhance user experiences and drive technology adoption that improves daily life and career readiness.

PERSONAL DETAILS

Current Location Kakinada
Date of birth December 26, 2006
Gender Female

EDUCATION

Graduation B.Tech / B.E. (Information Technology)
Aditya University, Kakinada, Andhra Pradesh with Score 8.45%
B.Tech / B.E. (Computer Science and Engineering (CSE))
Aditya University, Kakinada, Andhra Pradesh
Class XII Andhra Pradesh
with 86% in 2024
Class X Andhra Pradesh
with 92% in 2022

INTERSHIPS AND PROJECTS

Projects **NextHire** (Duration February 2026 - July 2026)
NextHire (AI/ML-Based Career Intelligence Platform) – Ongoing Development
Developing an AI-powered platform that analyzes coding profiles from GitHub, LeetCode, CodeChef, and HackerRank to assess job readiness, predict suitable career roles, identify skill gaps, and generate personalized learning roadmaps. Integrating Machine Learning models, resume analysis, progress tracking, and an AI assistant (NexMind) to help developers improve employability. Future scope includes recruiter-side candidate discovery and ranking based on technical readiness. Project repository:<https://github.com/SAIHAR26/NextHire>
ComplaintManagementPortal (Duration January 2026 - February 2026)
The Complaint Management System is a desktop-based application developed to help students register and track complaints within a college environment. The system provides separate login portals for students and administrators. Students can submit complaints related to academics, hostel, transport, or other issues and monitor the status of their requests. Administrators can view all complaints, update their status, and manage them efficiently. The application is built using Java Swing for the graphical user interface, Core Java for application logic, and JDBC for database connectivity with a MySQL database to store and manage complaint records. This system improves transparency, reduces manual paperwork, and enables faster resolution of student issues.
CampusRide (Duration December 2025 - July 2026)
CampusRide is an IoT-based smart school bus tracking system designed to improve student safety and transportation monitoring. The system uses an ESP32 microcontroller and SIM800L GSM module to transmit real-time location and device data through the mobile network to a Firebase cloud database. The data is accessed through a web application dashboard used by students, parents, and school management to monitor bus information and track transportation activities. The system also includes MicroSD card backup storage to locally store data when network connectivity is unavailable, ensuring reliable data collection. The hardware prototype and core tracking functionality have been developed, while the backend infrastructure and advanced dashboard features are currently under development.

SKILLS AND ACHIEVEMENTS

Skills Web Development, C Programming Language, C Plus Plus, java, GIT, Github, Excel, PowerPoint, Chatgpt
Language English (Both), Telugu (Both), Hindi (Both)
